Both 5G and Wi-Fi 6 are built from the same foundation and will co-exist to support different use cases.

Wi-Fi 6 will continue to be the access choice for indoor networks.

5G will be the designated choice for outdoor networks.

Wi-Fi 6 and 5G are suitable for many industries.

Timeline for Wi-Fi 6 and 5G:

Wi-Fi 6 appears to be a faster roll out when compared to 5G, with hand-set vendors such as Samsung announcing Wi-Fi 6 capable smartphones in 2019.

5G networks and services will be deployed in stages over the next several years.

Summary:
Cisco is very excited for the next wave of wireless access. Both 5G and Wi-Fi 6 will provide an advancement in performance for new and existing networks.

5 Things to Know About Wi-Fi 6 and 5G:

Wi-Fi 6 and 5G will provide enhancements to wireless networks, including:

- Increased speed
- Lower latency
- Increased device density
- Enhanced mobile broadband
- Support for mission-critical IoT devices

Wi-Fi 6 and 5G will complement each other, providing the best solution for different use cases. Wi-Fi 6 is ideal for indoor networks, while 5G is suitable for outdoor networks.
