Incoming Webhook

The Incoming Webhook app allows you to configure services to notify you about activities that you would like to track by sending a notification to Teams through a connector.

How to use

1. To add the Incoming Webhook app please follow these instructions: Add an App to Microsoft Teams
2. Once you have selected the Team and Channel where the app should be added, click Set up a connector.
3. On the next screen, give your Incoming Webhook a name and upload an image to associate with the data coming from the webhook, if desired, and click Create.
4. On the following screen, copy the URL show. This URL is needed to configure the service sending data to your Channel. Then click **Done**.

5. Follow the service specific instructions for creating a webhook to send notifications to MS Teams using the URL you copied in Step 4.
